PROFESSIONAL SUMMARY

Electronics Engineering student (since 2021) specializing in backend systems and mobile application development. Experienced in building scalable architectures, automation tools, and intelligent study platforms integrating APIs and machine learning. Strong focus on system design, performance optimization, and delivering end-to-end solutions — from backend logic to user-facing applications.

PROJECTS — EDYOU ORGANIZATION

■ Edyou Organization — Telegram · Web · Mobile Study Platform

Edyou Bot

■ t.me/MRAWABBOT

Telegram Bot

A smart Telegram study companion built in Python. Delivers structured academic content across departments, automates study workflows, and makes studying effortless.

Python

Aiogram

Telebot

Flask

SQLAlchemy

Edyou Study Companion Site

■ studybot.viewdns.net

Web App

A web interface extending Edyou bot features. Admins log in, manage accounts, configure lecture settings, and access study tools from any browser.

HTML

CSS

JavaScript

Flask

REST APIs

Edyou Mobile App

■ studybot.viewdns.net/#app-download

Flutter App

Cross-platform mobile app (Android/iOS) powered by Flutter. Register, log in, download lectures, and access bot features on the go with ML Kit OCR integration.
